Team ID	
Project Name	UCABS-Cab Booking System
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming for the Cab Booking project provides an open environment where team members can share ideas to solve transportation problems and improve ride-booking services. The team discussed different solutions to make cab booking easier, faster, and safer for passengers and drivers.

The project proposes Ucabs, a cab booking platform developed using the MERN stack (MongoDB, Express.js, React.js, and Node.js). It works similarly to ride-hailing applications like Uber and connects passengers with nearby drivers in real time.

The platform includes a Rider app for booking rides, a Driver dashboard for managing trips, and an Admin panel for verifying driver KYC documents. It uses Socket.io for real-time updates and the TomTom Maps API for accurate navigation, ensuring a safe and efficient ride experience through OTP-verified trips.
